Third-year Electrical Engineering student at the Technion with a strong academic foundation in computer architecture, data structures, and low-level development. Experienced in parallel hardware design and debugging complex systems. Demonstrates proven leadership and analytical decision-making under pressure.

Education 2024 – Present | B.Sc. in Electrical Engineering, Technion – Israel Institute of Technology

• GPA: 81.1

• Relevant Coursework: Data Structures and Algorithms (84), Computer Architecture, Digital Systems, Introduction to Computer Science, Signals and Systems (86), Electric Circuits(93).

- Designed and verified a real-time interactive game on an Intel DE10 Lite FPGA, implementing hardware concurrency, multi-state synchronization (FSMs), memory-mapped architecture, and custom VGA display controllers.

- Debugged hardware timing, synchronization, and race conditions using SignalTap Logic Analyzer to ensure cycle-accurate execution and zero-latency performance.

Technical Skills

• Programming Languages: C, SystemVerilog, Assembly (RISC-V), MATLAB.

• Systems & Tools: ModelSim, Quartus , PlatformIO, Visual Studio, Git.

Military Service 2022 – 2024 | Control Cell, Israeli Air Force

- **Operations:** Managed real-time operational and network activities, making critical decisions under high-pressure scenarios. Coordinated staff operations and worked directly with senior officers.
- **Reservist Coordinator:** Handled unit manpower, created work schedules, and organized reservist activities.
- Awarded for excellence in service.

Additional activities and languages

• Academic Mentor: Mentoring first-semester engineering students through their academic and technical transition at the Technion.

• Languages: Hebrew (Native), English (Fluent).
